

Barrel Clamps

Barrel Clamps - Referred to as "Barrel Clamp", this hydraulic accessory is used on forklifts in order to compress items which you wish to transfer utilizing the forklift. Typically, they are utilized to barrels, handle kegs, and paper rolls, together with a few barrel clamp designs having the ability to revolve the load. For example, the revolving function allows a forklift operator to be able to put in a vertically stored paper into the horizontal intake of a printing press.
